From the Homeric passages which mention Crete and Cretan heroes there develops a picture of Crete as a Mycenaean island stronghold, thickly settled with a mixed population, whose king Idomeneus holds a high position among the other Mycenaean kings. The memory of Minoan Crete is preserved in the names of Minos, Rhadamanthys, and Ariadne; very likely in the names of Idomeneus' opponents Phaistos,

son of Boros, and Asios, son of Hyrtakos, may be found reference to the Achaean conquests in Crete.

The author shows that most of the hypotheses on which Ventris worked (the inflectional character of the language, the word-divider, the distinction between phonetic signs and ideograms, &c.) were not arbitrarily assumed by him for the sake of the decipherment, but had been postulated by his predecessors in the matter.
